

examples:

1. Youtube

Files:

Text: Share your videos with friends, family, and the world.

Url: <https://youtube.com/>

2. Jstris

Files:

Text: Online multiplayer puzzle game.

Url: <https://jstris.jezevec10.com/>

Testing on /search_vectors:

- Testing with query “video game” and k_returns = 3
 - Outputs Jstris with score 0.577089787
 - Outputs YouTube with score 0.540146649
 - Outputs hello.com with score 0.107122697
 - **Result: works as intended, I hoped jstris would be the first to be returned**

Plan for actual testing:

- Should understand abstract qualities like mood or tone
- I will evaluate the embeddings based on if I would also return these results LOL
- I will populate the database with enough examples that cover a wide emotional/aesthetic range
- Websites I added (for each, i added url, screenshot of website, and simple description of website):
 - <https://www.youtube.com/>
 - <https://jstris.jezevec10.com/>
 - <https://www.instagram.com/>
 - <https://x.com/>
 - <https://chatgpt.com/>
 - <https://www.amazon.com/>
 - <https://www.pinterest.com/>
 - <https://www.apple.com/>
 - <https://play2048.co/>
 - <https://monkeytype.com/>
 - <https://brookings.edu/>
 - <https://www.historytoday.com/>
 - <https://www.nasa.gov/>
 - <https://www.calm.com/>
 - <https://unsplash.com/>
 - <https://www.greenpeace.org/usa/>
 - <https://jacobin.com/>
 - <https://www.irs.gov/>
 - <https://www.healthcare.gov/>
 - <https://www.skyscanner.com/>
 - <https://open.spotify.com/>
 - <https://www.billboard.com/>
 - <https://www.nationalgeographic.com/>
 - <https://weather.com/>

- Queries that I tested with what I expected to show up vs. what actually showed up from /search_vectors along with the scores:
 - “Chaotic and cluttered”
 - Expect: 1) instagram 2) x.com 3) amazon.com
 - Actual: 1) instagram (0.602034748) 2) amazon (0.585971296) 3) unsplash (0.576186538)
 - “techy and minimalist”
 - Expect: 1) apple.com 2) chatgpt.com 3) monkeytype.com
 - Actual: 1) instagram (0.608983755) 2) amazon (0.599853873) 3) calm (0.598816097)
 - “childlike and whimsical”
 - Expect: 1) play2048.co 2) pinterest.com 3) billboard.com
 - Actual: 1) instagram (0.606117487) 2) amazon (0.600889385) 3) calm (0.585480928)
 - “cold and corporate”
 - Expect: 1) irs.gov 2) apple.com 3) nasa.gov
 - Actual:
 - {
 - "status": "success",
 - "query": "cold and corporate",
 - "results_count": 3,
 - "results": [
 - {
 - "id": "https://www.instagram.com/",

○ "bold and in-your-face"

■ Expect: 1) jacobin.com 2) greenpeace.org 3) x.com

■ Actual:

- {
- "status": "success",
- "query": "bold and in-your-face",
- "results_count": 3,
- "results": [
- {
- "id": "https://www.instagram.com/",
- "score": 0.623572469
- },
- {
- "id": "https://www.amazon.com/",
- "score": 0.606767654
- },
- {
- "id": "https://open.spotify.com/",
- "score": 0.586276889
- }
-]
- }

- Obvious issue is that instagram and amazon showing up on every single list...
- Currently experimenting with giving more weight to image embeddings and using clip_text_embeddings() for the text description too in /search_vectors

- Doing this shows national geographic a lot more
